

Expanding HealthHUB® locations at CVS Pharmacy®

HealthHUB locations are expanding to more regions to help improve members' health and access to care.

Based on the success of three pilot HealthHUB locations opened earlier this year in Houston, we plan to open HealthHUBs in Atlanta, Philadelphia/Southern New Jersey and Tampa by the end of 2019, in addition to filling out the Houston metropolitan area. We plan to have a total of 1,500 HealthHUBs operating by the end of 2021.

The HealthHUB locations bring a broader range of health care services, wellness products and trusted advice and personal care. HealthHUBs are a powerful example of how CVS Health can provide consumers with convenient, personalized and integrated access to local health care.

Additional details:

- Our goal is to fundamentally transform the consumer health experience for the millions of Americans we interact with every day.
- We recognize the integral role that physicians play in people's lives. Our intention is to complement the patient-doctor relationship by working closely with all types of providers to offer more complete patient information and data, which we'll gather through increased interactions at our HealthHUBs.
- The HealthHUB is a first-of-its-kind community-based store concept focused on helping customers get well – and stay well -- by offering a broader range of healthcare services, wellness products, trusted advice and personalized care, all with the ease of walking right into a local CVS Pharmacy.
- For customers who wish to manage their care from the palm of their hand, HealthHUB will offer access to digitally-enabled health and wellness apps, and connected health monitors and smart devices, making the experience of achieving your best health easier and more achievable.
